The AFR BOSS magazine only accepts material that is submitted via the following delivery channels: Quickcut, Websend and AdOnline. All advertisements submitted via Quickcut will be converted to PDF files using the guidelines created by 3DAP. These guidelines are published at the web site www.3dap.com.au For more information on Quickcut and delivery please contact Quickcut on 02 9938 7500 or at www.quickcut.com.au.

The delivery and receipt of advertising material via Quickcut and Websend is an automated workflow. As a result material instructions are not able to

be viewed and should be communicated to your sales contact. Advertising Production will output a positional proof to ensure it resembles the supplied client proof. Our team of Imaging specialists are also on hand to check the colour within the files, and to ensure that the reproduction of the supplied creative will be to the expectation of the client proof.

PROOFS

Proofs should provide an accurate representation of the intended print result and are necessary for us to ensure colour accuracy on press. For this reason, Fairfax will only accept 3DAP compliant proofs. If you choose not to supply a digital proof, Fairfax cannot be held responsible if the printer result varies from what the client has approved. To produce adequate digital proofs we require 3DAP approved digital proofs (see www.3dap.com.au).

COLOUR GUIDELINES

SPOT COLOUR

This is achieved by using the four colour printing process (i.e. PMS colours must be broken down into CMYK process).

PROCESS COLOUR

Colour specified in percentages of cyan, magenta, yellow and black.

DOT GAIN

Dot gain is not a fault of web offset printing, but rather a characteristic. The dot gain can to some extent be accommodated in production but there are some things, outlined below, that can help:

- All material should compensate for dot gain of up to 15-20% in the 50% dot area. Ensure midtones are lighter and have more contrast to compensate for the above dot gain.
- Highlights can also muddy if there is a black dot visible, which will also gain on press. The first printing highlights should be:

	C	M	Y	K
First printing highlight	3%	2%	2%	0%
Midtones	Allow for up to 15-20% dot gain			
Shadow	Range from 280-310%			

GREY BALANCE

Maintaining Grey balance throughout the separation is extremely important for quality four-colour reproduction.

Separations without neutral Grey's will reproduce with perceivable colour casts on press. As a general rule for magazine reproduction, Grey balance requires slightly more cyan relative to less amounts of magenta to yellow.
